

libr

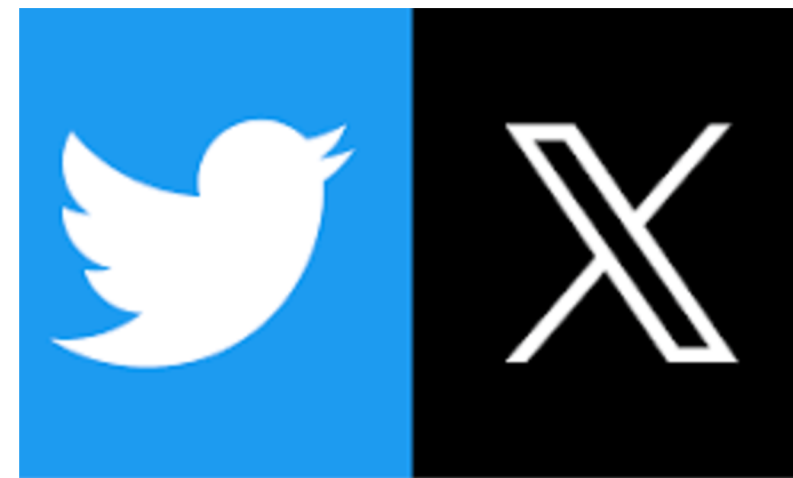

Your Space. Your Quorum. Your Rules.

Problem Statement

There are either entirely centrally moderated or completely unmoderated platforms right now.

The Moderation Dilemma

What if moderation didn't mean censorship?

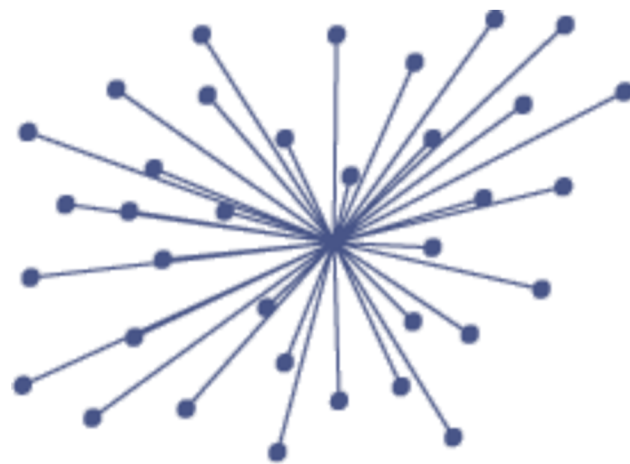

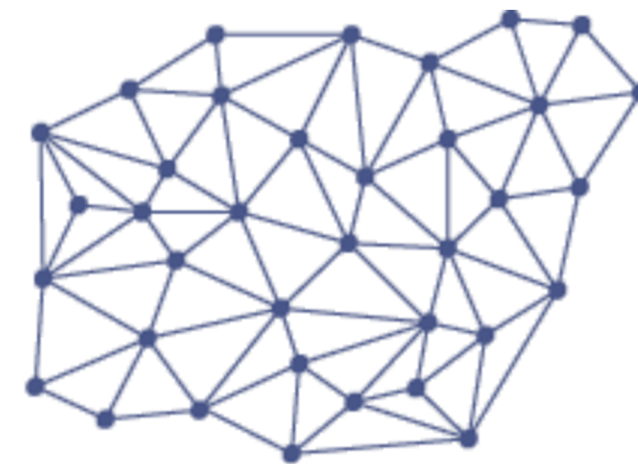

Constraints

No centralized moderations
Moderation rules as per community
No central database

A fast, seamless P2P platform to achieve the above goals is designed

Centralized

Decentralized

Core Features (User-Facing)

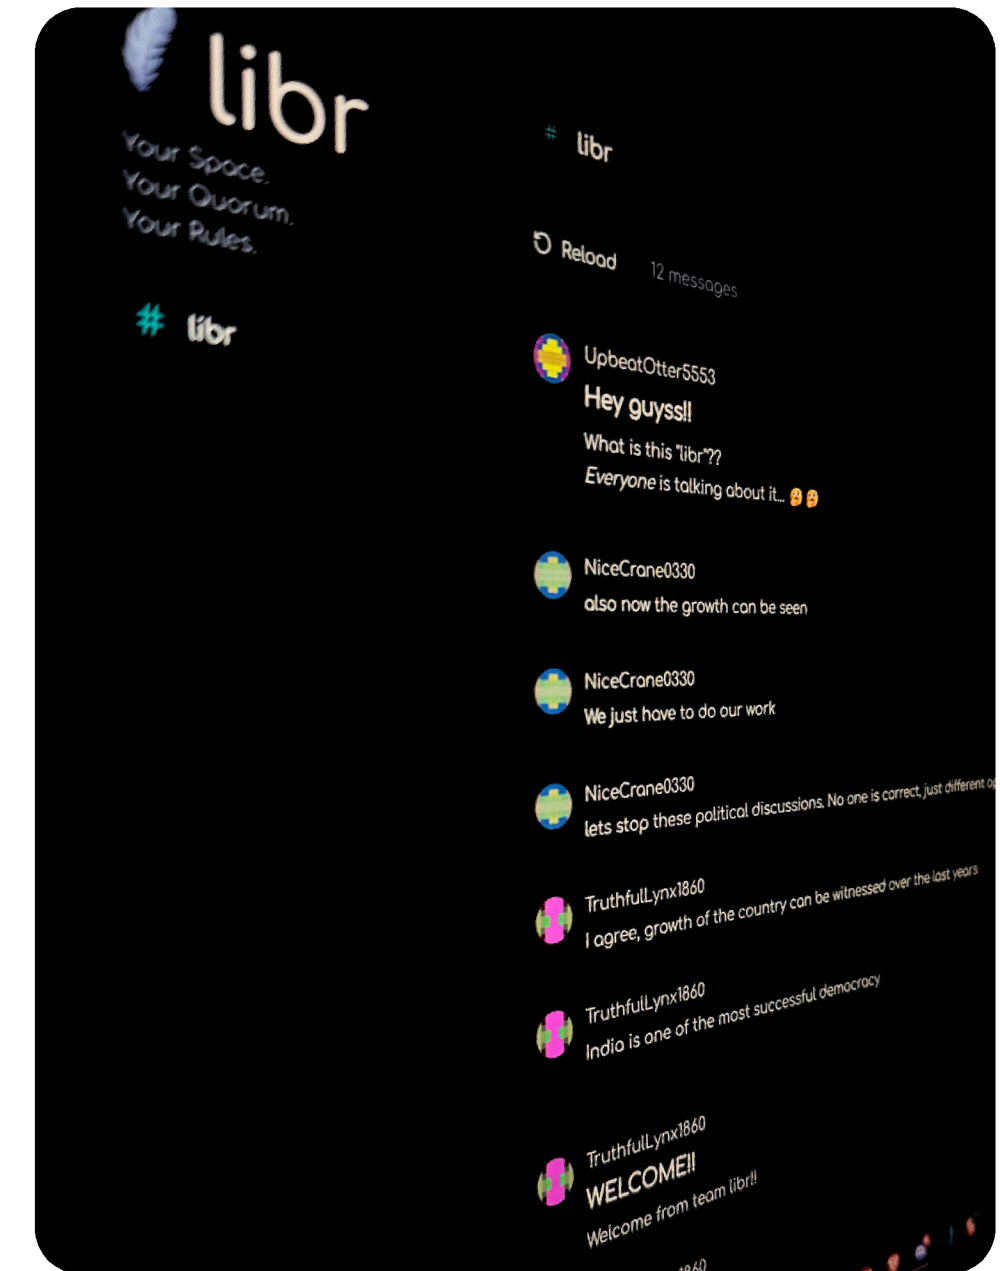

No secret censorship — If a post is taken down, you'll see the reason and who decided.

Community-powered rules — Your group sets the guidelines, not a company boardroom.

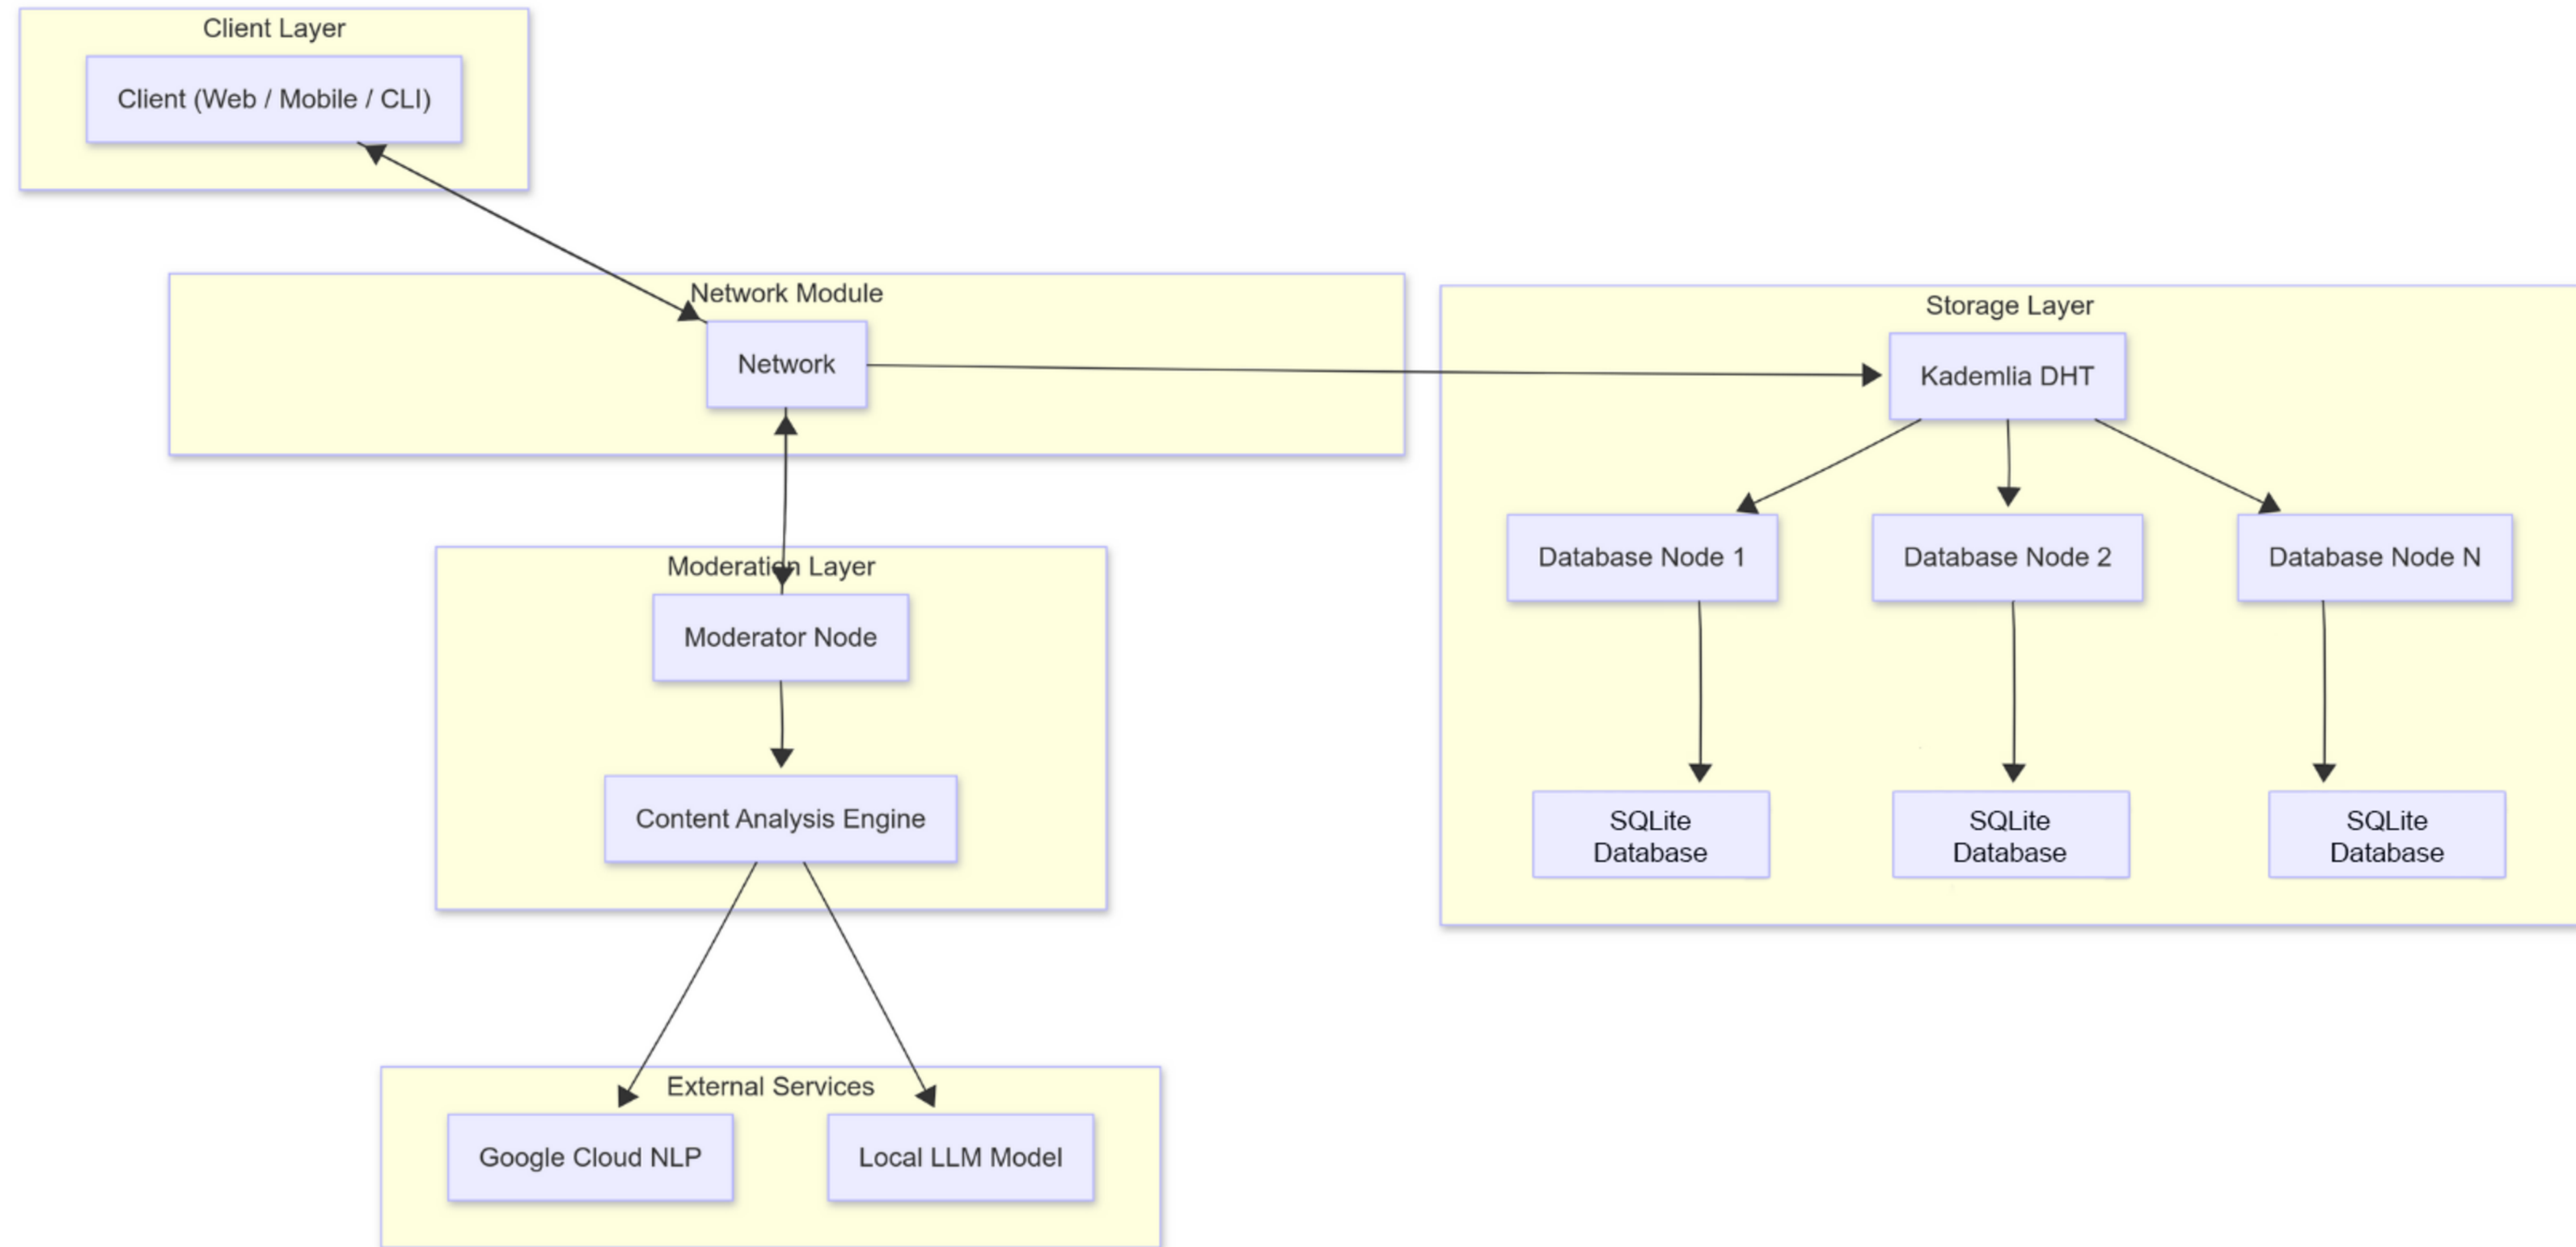

Safe but still free — Harmful posts get blocked, but fair discussion is protected.

Built to grow — Communities can add new moderation tools or change storage easily.

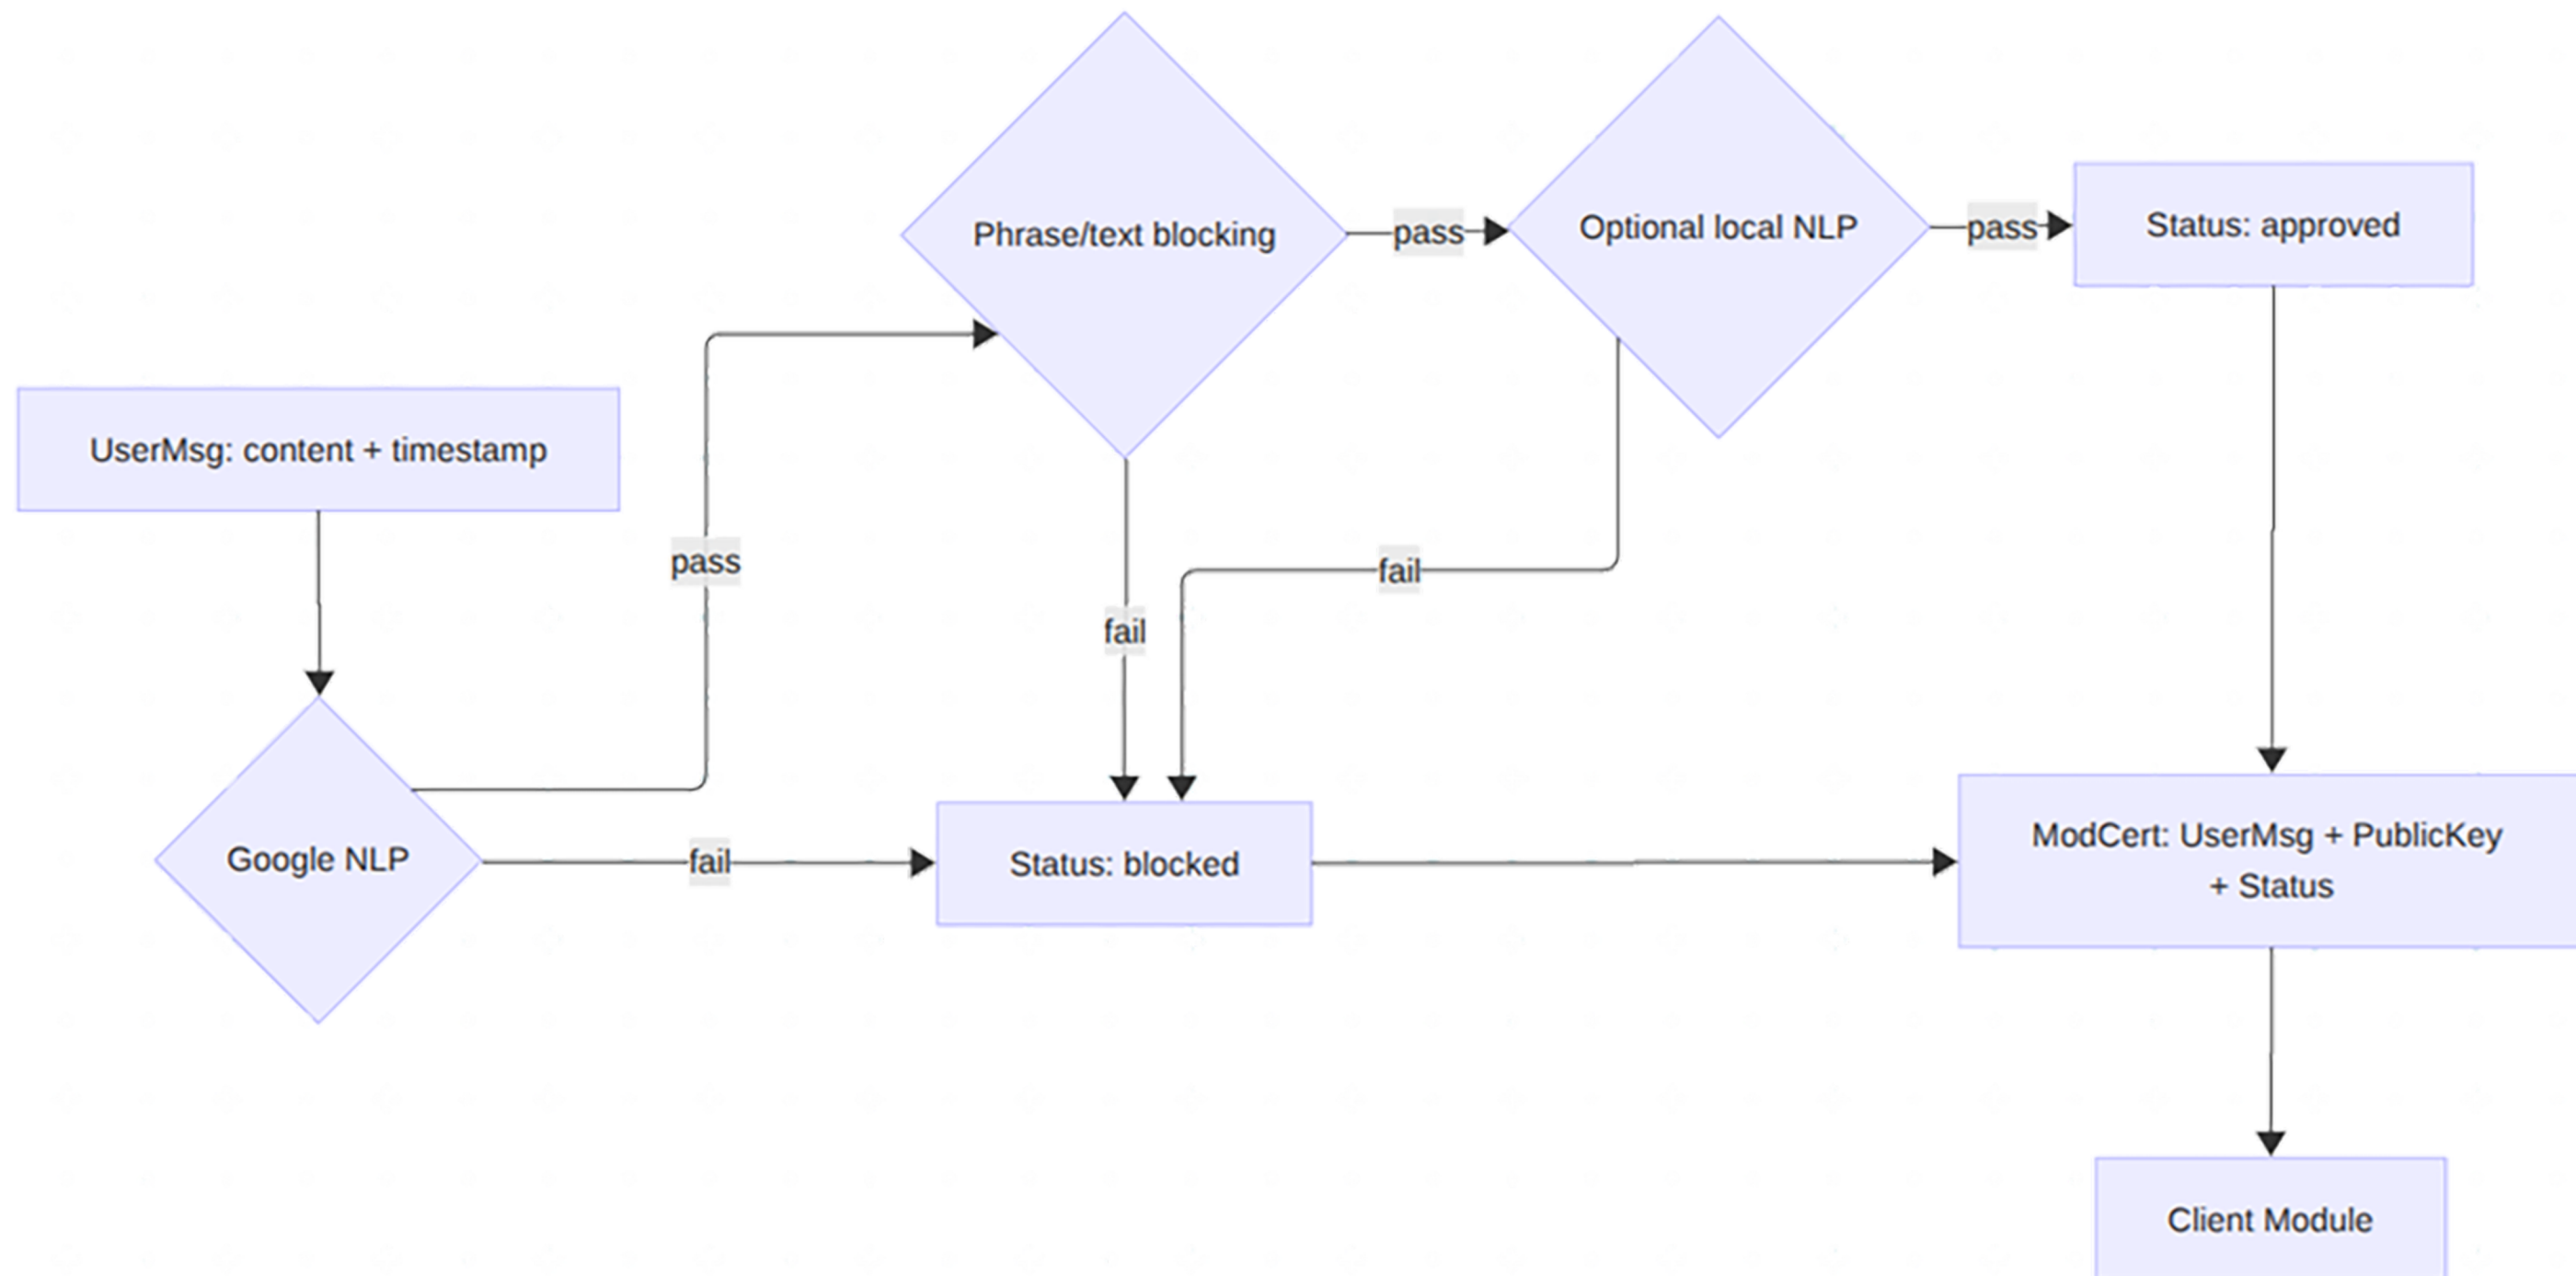

Architecture

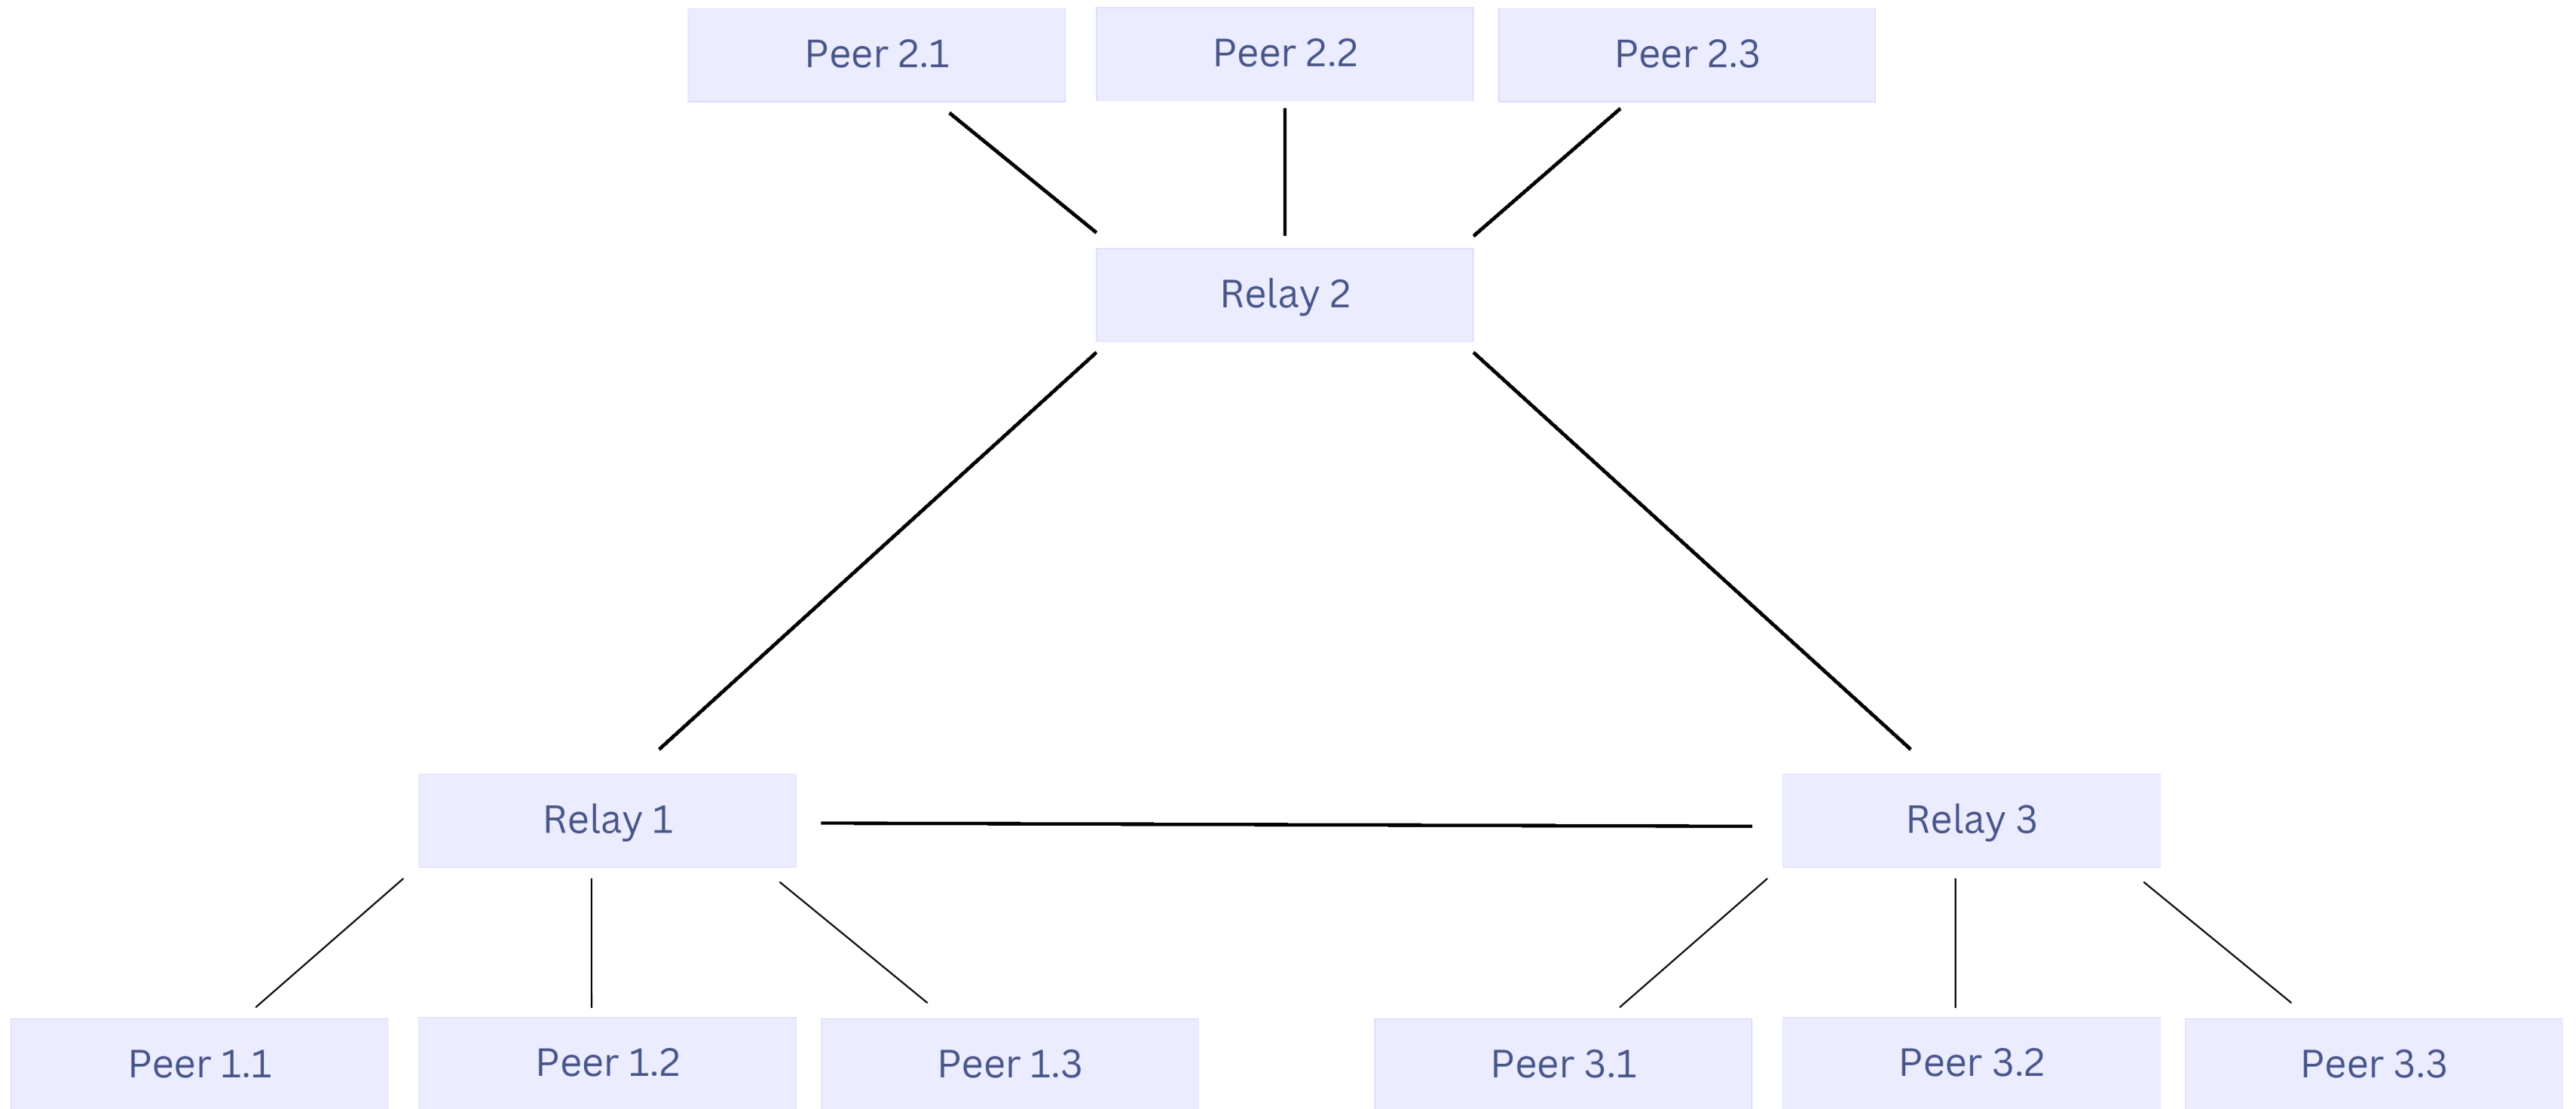

Moderator

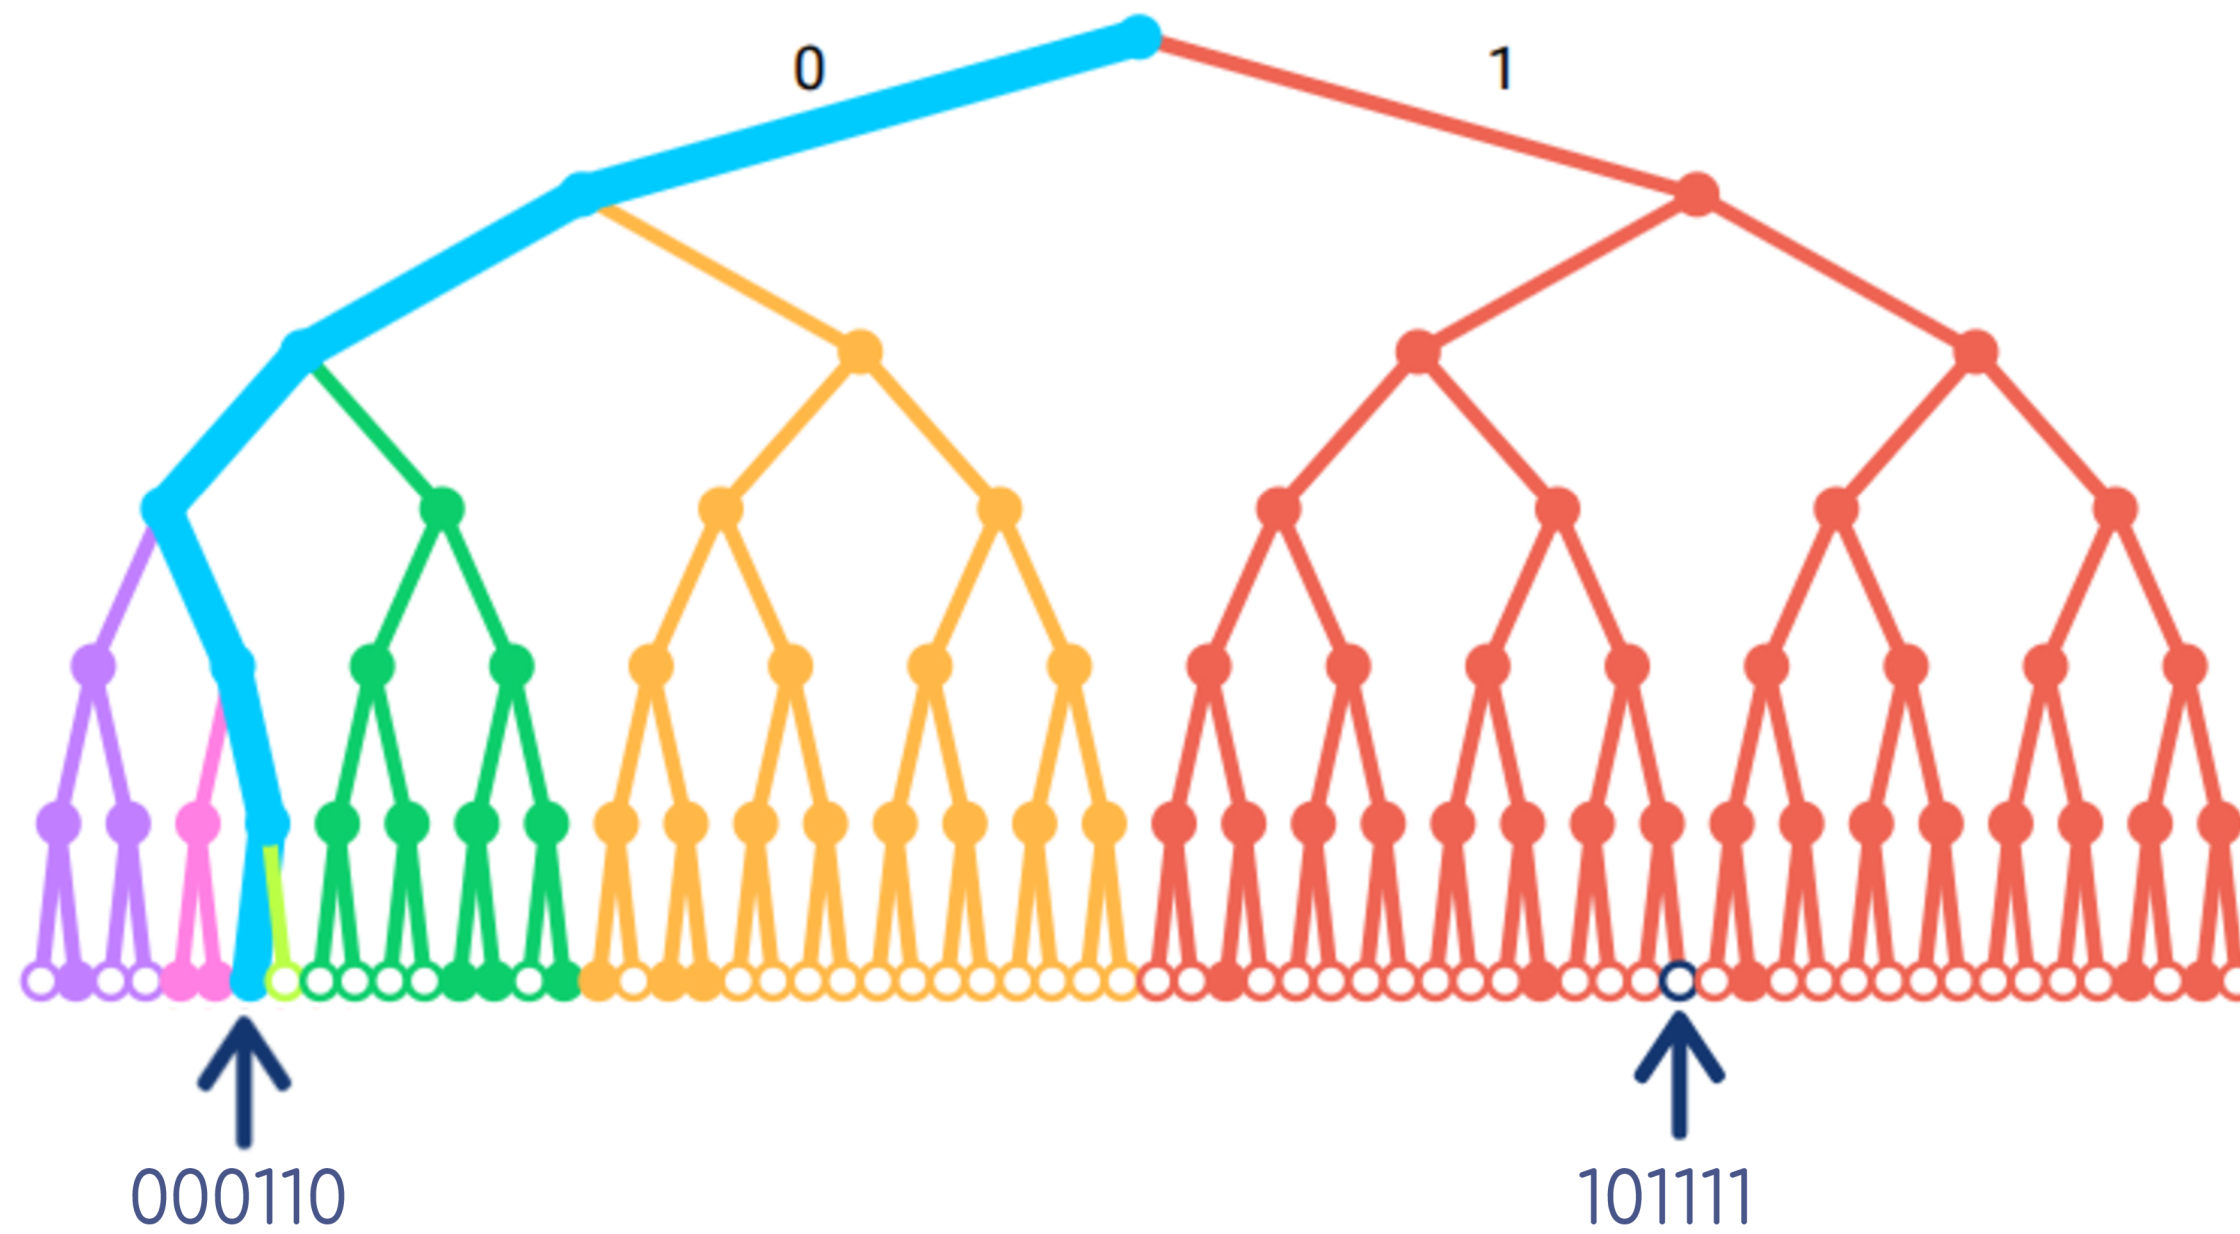

Network

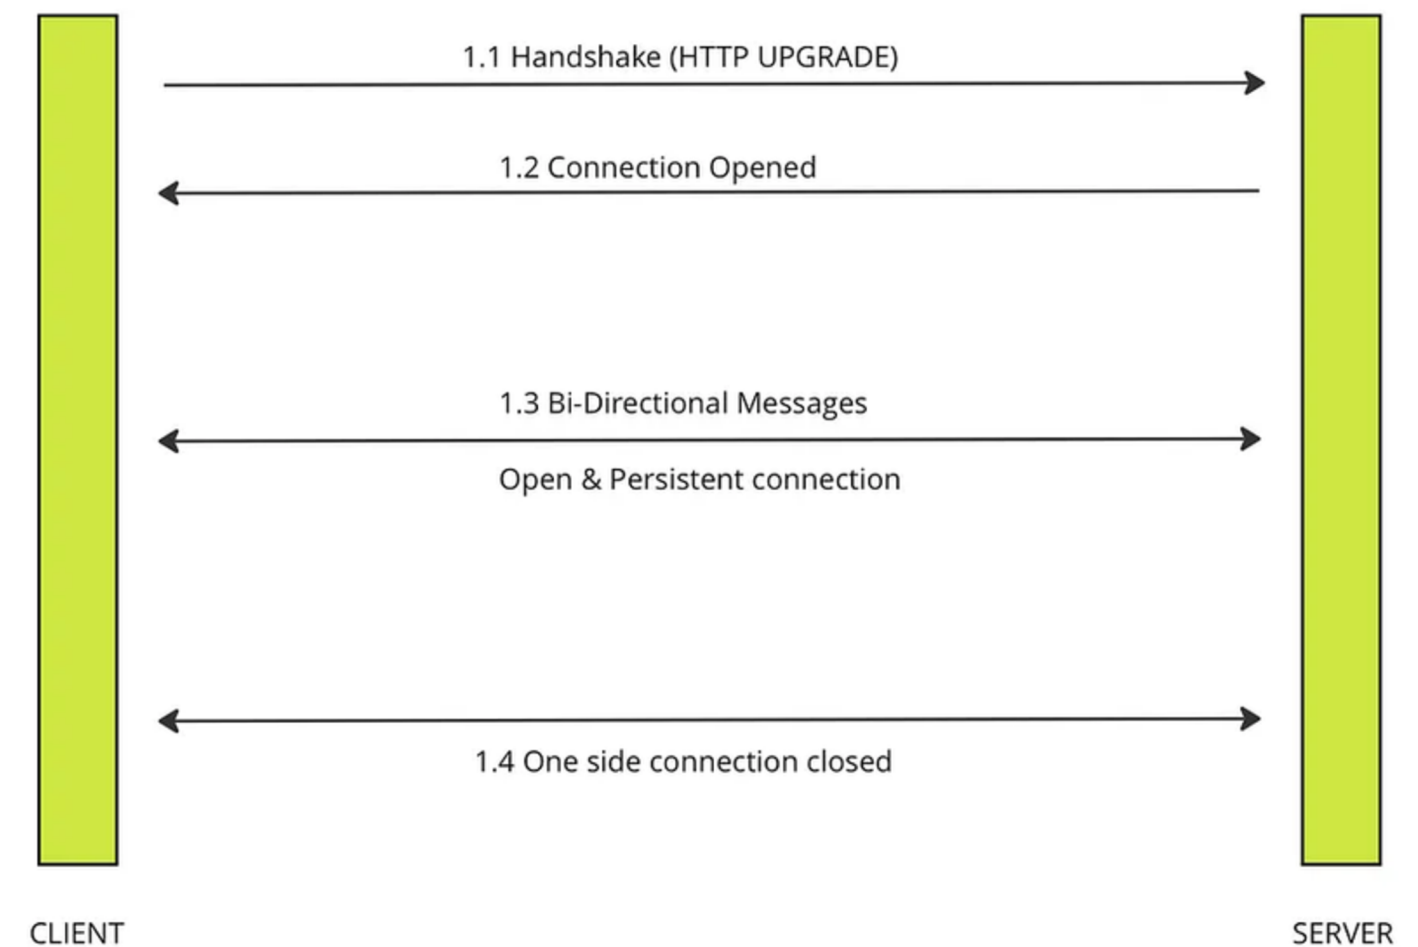

Kademlia DHT

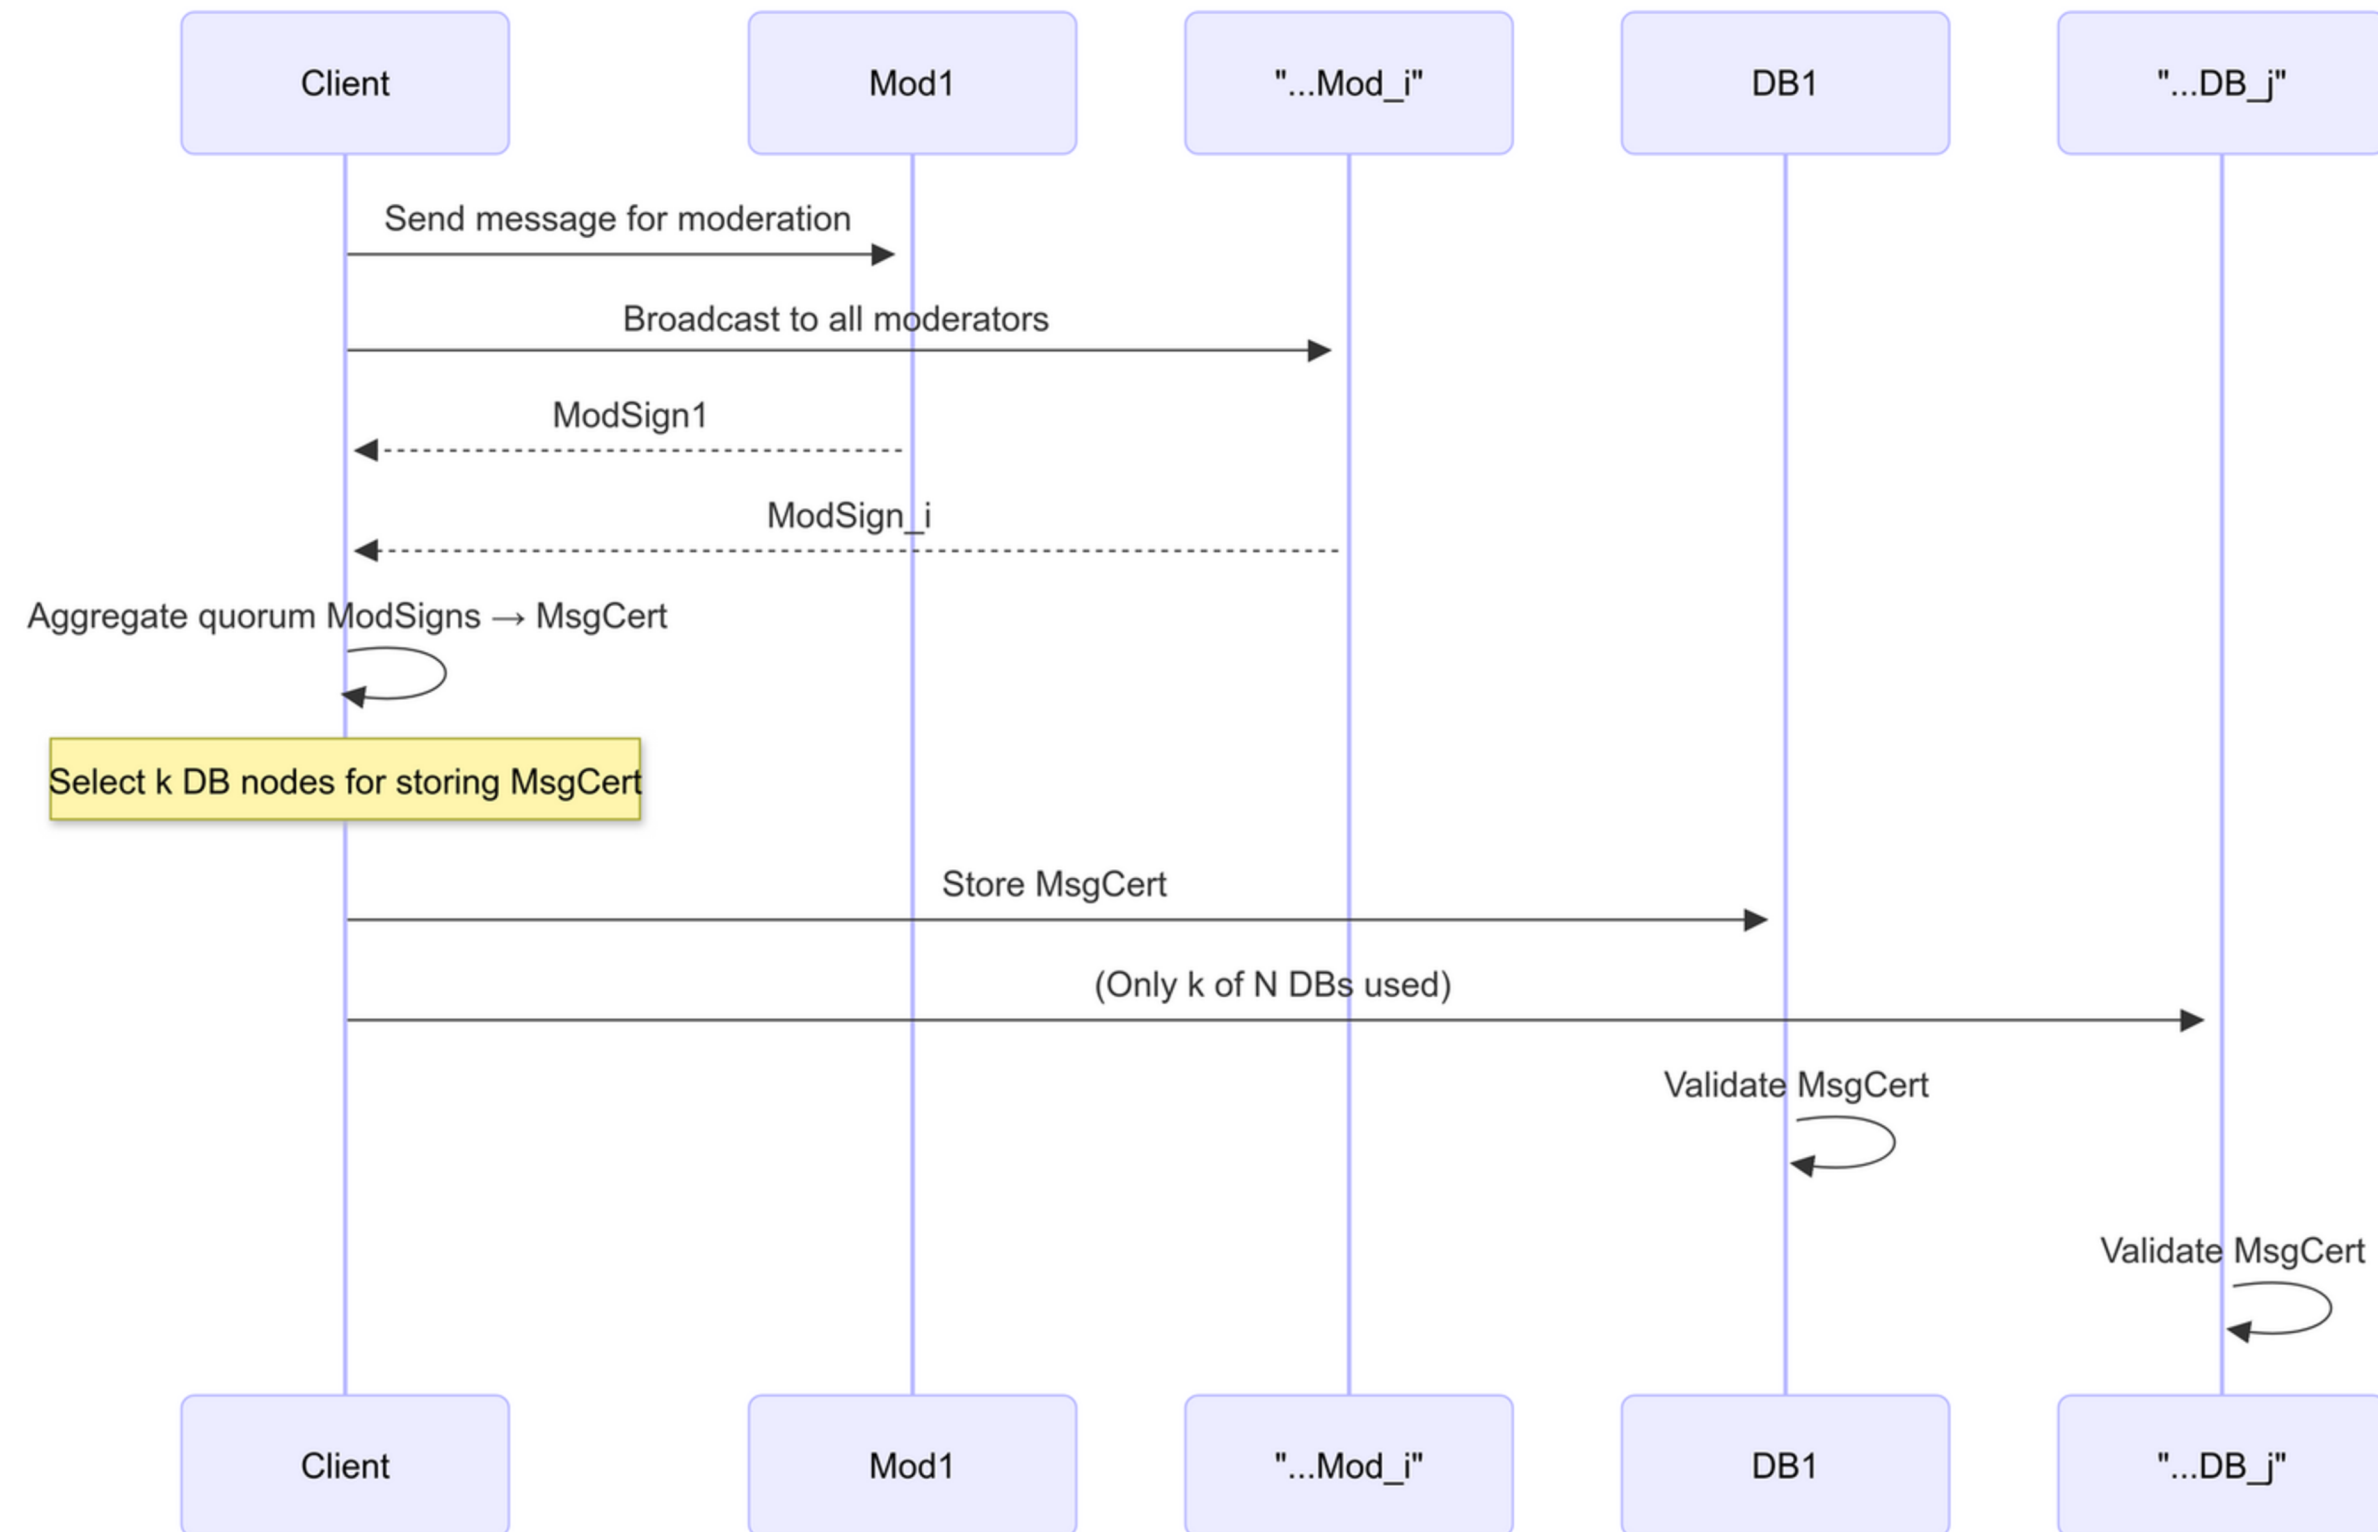

WebSockets

- Full duplex communication
- Connection stays alive
- Manages communication between other modules
- Establishes the P2P communication between systems
- Ensures no central server is required

Our User Flow - Report

Any user can report any message

Mods manually re-moderate & DB nodes delete the post

Future Implementations

- Governance scheme
 - Multiple communities
 - Blockchain integration
 - Ad and revenue
 - Mobile client
-
- Post likes
 - Custom username
 - User flairs

Early Traction (Pilot Proof)

Pilot Activity

-  90+ Active Users
-  100+ Downloads
-  1,000+ Messages Exchanged
-  Compatibility across operating systems

Landing Page Performance

-  250+ Visitors
-  630+ Page Views
-  150+ Medium Reads

About Us

Started as

Academic Project

guided by

Dr. Romi Banerjee

Professor, CSE @IIT Jodhpur

with us,

Aradhya Mahajan

Co-Founder, libr

B.Tech, CSE @ IIT Jodhpur

Mentor, E-Cell IITJ

Lakshya Jain

Co-Founder, libr

B.Tech, CSE @ IIT Jodhpur

Coordinator, DevUp Labs IITJ

Continuing as an

Open Source Software

with our team,
